ACKNOWLEDGEMENT

The satisfaction that accompanies the successful completion of our project would be

incomplete without mentioning the people who made it possible, without whose constant

guidance and encouragement would have made efforts go in vain. We consider ourself

privileged to express gratitude and respect towards all those who has guided through the

completion of our project.

We convey thanks to our internship guide Ms. Jitisha Patel, Information Technology,

CGPIT for providing encouragement, constant support and guidance which was of a great

help to complete this project work successfully.

We are grateful to Ms. Palak Desai, Head of the Department of Information Technology,

CGPIT for giving us the support and encouragement that was necessary for the completion

of our project.

We would also like to express our gratitude to Dr. R.V.Patil Director of Chhotubhai

Gopalbhai Patel Institute of Technology for providing us congenial environment to work

in.

We would like to thank all the faculty members for their patience, understanding and

guidance that gave us strength and will power to work through the long tedious hours for

our project and preparing the report.

Last but not the least, we would also like to thank our family and colleagues, who have

cooperated during the preparation of our report and without them this project would not

have been possible. Their ideas helped us a lot to improve our project report.

Yash Patel (201703100810045)

Chintan Bambharoliya (201703100810052)

iii

ABSTRACT

The purpose of this project is to automate the existing manual system by the help computerized equipments and full-fledged coputer software, fulfilling there requirements, so that their valuable data/information store for longer period with easy accessing and manipulation of same .The required software and hardware are easily available and easy to work with.

Here learner can learn new skills and also develop new skills in any field by enrolling the course and get certificate after completion of course. The learner can became the instructor by uploading the data to admin and if verified by the admin can became instructor and instructor can add new courses by categorize by topic such as web development ,Design,etc. Here learner has to buy monthly package rather than buying a particular course.

Chapter 1 Introduction

1.1 Background

There can be no doubt that technology has transformed the way education is delivered to people across the globe. We now live in an interconnected world where the traditional concept of formal learning, taking place in a single physical location, is becoming increasingly less relevant. Today's learners are becoming dissatisfied with the stand-and-deliver approach to education that needs to obey attendance times, learning venues, and modes of participation. The emergence of communication technologies and mobile devices has enabled a new generation of information consumers to satisfy their demands for knowledge without the need to meet in a physical location. Software vendors, open-source developers, and educational institutions, knowledge of this development, have embraced systems that can facilitate the management of courses and engagement with students remotely.

1.2 Problem Definition

The technologies that facilitate the provision of courses over long distances are broadly termed "learning management systems" or "LMSs." Learning management systems can be defined as web-based software platforms that provide an interactive online learning environment and automate the administration, organization, delivery, and reporting of educational content and learner outcomes.

1.3 Motivation

Due to this pandemic situation the learning system is became online based due to which many organization has started mode if online education. But the some organization can't provide such system, so we have made this project for those learner who can't get education from such institute.

Here learnes needs to buy subscription pack rather than a particular course. So that learner can enroll as many number of courses he/she wanted to learn new skills.

1.4 Objective

Here by compeleting this project learners will achieve the best experience and will learn new technologics. Here as courses will be from verified instructor so that learner can easily understand the content of topic. In this instructor will be also get paid as per the student enroll and will be appreciate for their courses provided.

1.5 Scope

Our main aim is at education process automation i.e we have tried to computerize various processes of online learning.

- It satisfy the user requirement
- Easy to understand by user and instructor
- Afforadable
- Have good user interface
- Get certificate after compeletion of course

1.6 Applications

• Anywhere, anytime learning

Chapter 2 System Planning

2.1 Project Development Approach

- Here we have use incremental model
- Why we have use this model:
 - o When the requirements are superior.
 - o A project has a lengthy development schedule.
 - When Software team are not very well skilled or trained.
 - o When the customer demands a quick release of the product.
 - You can develop prioritized requirements first
- Advantages of your software model:
 - o Errors are easy to be detected.
 - o Easier to test and debug
 - More flexible.
 - Simple to manage risk because it handled during its iteration.

2.2 System Modules

2.2.1 Admin Module

- Admin can see the whole details of the course, learners and instructors.
- Admin can activate the instructor and can also deactivate the instructor.
- Admin can add domain and modify the domain.
- Admin can activate/deactivate the course.
- Admin can see the learners details like course progress and course completed by a particular learner.
- Admin can message to instructor about their course uploaded.
- Admin can delete course, instructor, domain and other admin.

2.2.2 Instructor Module

- Instructor can see the details of the course which he has uploaded.
- Instructor can create new course.
- Instructor can see the number of learner enroll in a particular course.
- Instructor can see the number of learner who has completed a particular course which uploaded by him.
- Instructor can reply to message from admin about their course uploaded.
- Instructor can modify/delete the course uploaded by him.

• Instructor view the pending course uploaded by him.

2.2.3 Learner Module

- Learner can see the course which he want to develop the skill in it.
- Learner can search the courses as per his topic.
- Learner can view his progress of his course enroll course.
- Learner can get certificate after compeletion of course.
- Learner can view course by domain wise.
- Learner can give feedback to course and instructor.
- Learner can contact to admin through contact us page.
- Anybody can verify certificate by reference id.

2.3 Functional Requirements

2.3.1 Login/Register

 This module will allow admin/instructor and learners to login or create his/her profile.

2.3.2 Forget Password/username

- Anyone can recover password by using his email address.
- Anyone can recover username by using his email address, first name and last name.

2.3.3 Create Domian

• Only Administrators will be allowed to create domain.

2.3.4 Modify Domain

• This option will allow administrators to modify domain.

2.3.5 Authentication.

 After a instructors/learners submits his credentials at the login page the credentials will be collected and validated against security repository, which is store on database.

2.3.6 Details Updation

Admin, Instructor and Learner can modify is personal details.

2.3.7 Create/Modify Course

• Instructor can create course and can modify uploaded by him.

2.3.8 Instructor Approval

• Admin can activate/deactivate the Instructor.

2.3.9 Course Approval

• Admin can activate/deactivate the course.

2.3.10 Meassage

 Admin and instructor can inte ract with each other about course uploaded by instructor.

2.3.11 Search Course

• Learner can search course by topic.

2.3.12 Course Enrolment

- This module will allow a learner to enrollment in course choose by him/her.
- Learner can save the course for later.

2.3.13 Rating

• Learner can give rating to both course and instructor with comments.

2.3.14 Course Certificate

• Certificate will be provided to learner after compeletion of course.

2.3.15 Certificate verification

• Anyone can verify the certificate provided by us by it's reference id.

2.3.16 Logout

• This module will destroy the login session of logged in.

2.4 Non Functional Requirements

2.4.1 Portability

 As this system can work on multiple platforms, portability is an essential attribute.

2.4.2 Performance

• Responses to queries shall take no longer to load onto the screen after the user submits the query.

2.4.3 Maintainability

 The module shall be designed with the view that bugs may need fixing, for future optimisations and for adding extra functionalities for developers.

2.4.4 Safety requirements

• Checking the fact that all clients must be attached to one server, so there can be appropriate control of the information.

2.4.5 Security

 The data generated by the user are only accessible by the admin and system should store these data in MySQL database and must no share them.

2.5 Hardware and Software Requirements

2.5.1 Hardware Requirements

- Server Side: Basic configuration for running web application such as Apache/MySQL server is necessary for deploying and testing of this system.
- **Client Side:**Computer with Speaker or Headphone facility / Laptop or smartphone.

2.5.2 Software Requirements

• **Server:** Web Server: Apache/XAMPP

Programming language: php 7

Database: MySQL

Operational System: Unix/Linux /Windows/macOS

• Client: Operational System: Unix/Linux /Windows/macOS

Software: Any kind of web browser with JavaScript and

HTML5.0 supported.

Conclusion and Future Scope

This website can access from anywhere and any time. Learner can enroll any course by taking subscription and get certificate after completion of course. The instructor can also provide their course which can be uploaded and can give knowledge to others to develop their skills.

In future, try to develop application of this website to support platform such as Android, iOS.
